FOR IMMEDIATE RELEASE

NEW STRIEBIG EVOLUTION FROM COLONIAL SAW

The Latest Innovations for this Legendary Swiss-made Vertical Panel Saw

Kingston, MA – April 2010 – Colonial Saw is proud to announce the addition of a new Swiss-made STRIEBIG Evolution—the ultimate manual traveling vertical panel saw—to its product offerings. The EVOLUTION includes many automatic features, such as auto-locking of the saw beam and panel support rollers. From the new *touch-screen* color display panel the operator can pivot, plunge and lock the saw head, engage the optional adjustable split-blade scoring saw, and also set the dimension of the optional EPS.X programmable stop. The screen will also display faults and provide easy trouble-shooting assistance. Digital measuring with fine adjustment in both axes is standard, as is the auto-shifting, full-wood backing grid, which can support thin materials and small parts. The Evolution also has a new laser light guide for the horizontal cut line, and externally produced cut lists can be uploaded via a new USB port.

Colonial Saw, Inc. is North America's importer of Swiss made STRIEBIG Vertical Panel Saws, LAMELLO specialty tools, biscuits and biscuit joiners, and the world's finest grinding machinery. For over half a century, the company has delivered uncompromising performance and value, along with one of the most comprehensive and responsive after-sale customer support programs in the industry.
