

CNC machines

What setup do I need if I want to create P-System grooves with my CNC machine?

1. CNC machine

- Machine with 3/4/5 axes + angle aggregate

2. CNC software

- Purchase software/macro/component from the manufacturer or
- Program the macro yourself

3. Suitable angle aggregate

- Aggregate sub program

The angle aggregate also enables the P-System groove to be cut in the centre of the surface

An overview of other aggregates is available on our website: www.lamello.com

Attention: Get the approval to use the P-System cutter on the aggregate from the CNC manufacturer

4. P-System cutting tool
